

FIFA 18 Assistant Manual

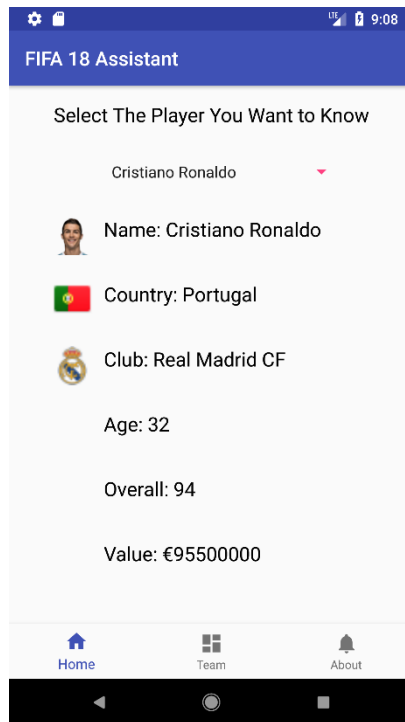

Group Members: Zhao Li, Qiyuan Xu, Hai Cao

This is an Android App of a FIFA 18 Mobile Database, serving as a mobile assistant for the video game.

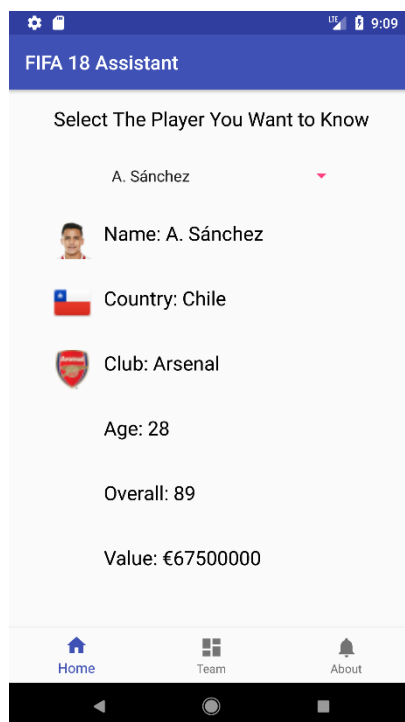

First, you can see our app with FIFA 18 icon, which is very easy to identify in your phone.

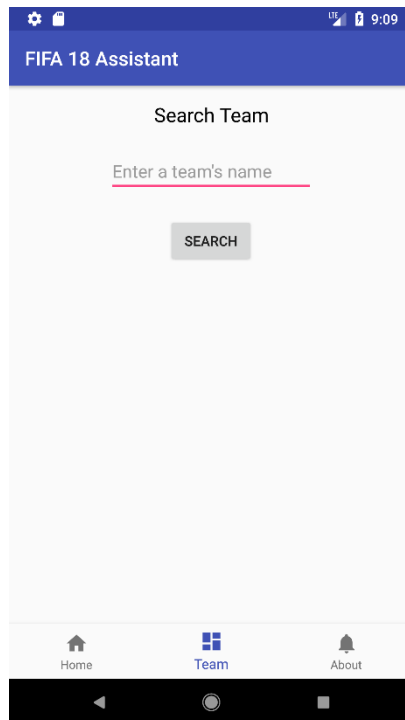

We recommend you to use this app with good internet connection for loading images from the internet. (loading images may take some time) If not connected with internet, you can still view text and numerical results.

Enter the app and you can see the home page. You can click the spinner and select a player that you want to know about. The selected one's information will be shown right below.

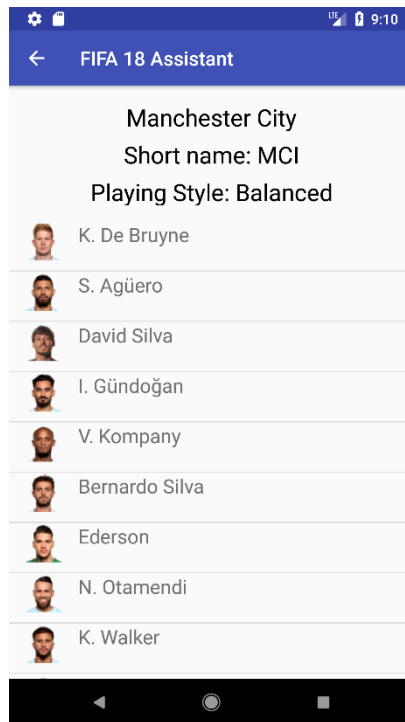

Press "Team" in the bottom and you will enter Team Search feature page.

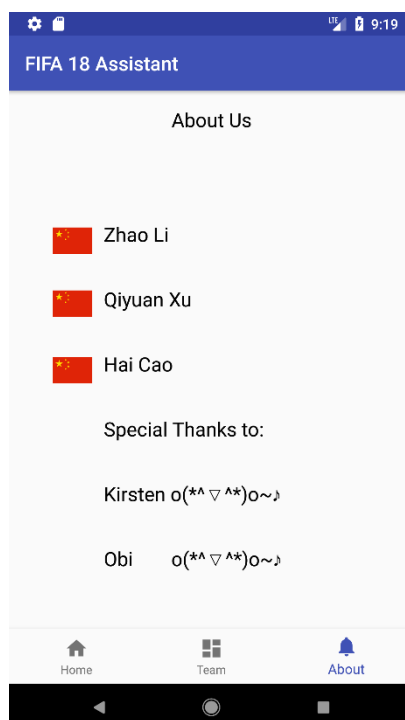

Then you can see an input box with hint: "Enter a team's name". What you enter doesn't have to be accurate team's name. For example, let's try "ci".

Since we designed a unique search method, all teams with a word starting with "ci" will be shown. Then you can click a team you want to see.

Let's say you choose Manchester City, and you will jump to another page displaying all players in this team.

Go back and click “About”, you can see our project team members and wonderful TAs!
